

ENERGY USE AND CONSERVATION

The Board of Directors of MSAD 68 supports energy conservation and the conservative use of all natural resources. By modeling such responsible behavior, students will learn of the growing importance of such measures.

The District, and all of its employees, should take a leadership role in developing a realistic energy strategy and ethic. In addition, the District should develop an awareness of energy needs and costs.

The Superintendent, through his/her designee, is directed to:

1. minimize the use of energy while maintaining an environment conducive to the health, safety and well-being of the students and staff without sacrificing program or course content;
2. maintain and operate all facilities and equipment for the efficient use of energy;
3. develop programs to update facilities and equipment for the conservation of energy, subject to the resources available;
4. provide in-service training for staff and students on the need to conserve energy, subject to the resources available;
5. utilize preventive maintenance, operations and facility personnel to make energy related improvements, subject to the resources available;
6. seek other energy conservation measures.
